

Whatever it takes...

We assess the most economical way to approach your clock installation or repair...rigging, cranes, ladders, or difficult access is all part of the job.

St. Mark's Episcopal Church, the Bowery, NYC

After a fire in the 1970's temporary clock dials were installed but did not meet historic preservation standards of the day.

We were able to fabricate new clock dials to be historically accurate, but the limited access was a challenge. A crane and scaffolding were prohibitively expensive. Additionally the historic graveyard on the property prohibited access by a boom lift.

The most cost-effective access was also the best in this case...utilizing professional riggers to scale the building using only ropes for removing the old clock dials and replacing the new.

Below: Riggers shown working on the steeple.

We take the worry out...

- We are fully insured
- If a permit is necessary, we will get it
- We only work with highly skilled manufacturers and repair facilities
- We can handle project management
- Our work is warranted
- We have served communities in the Northeast with integrity since 1991

Clock services...

- Sales
- Removal and installation
- Restoration and repair
- Custom dial fabrication
- Back-lighting
- Many dial and hand styles available...ask for details

Our state-of-the art equipment...

The Controller

We provide digital impulse clock controllers for our projects. The units automatically reset the hands after power failures and for seasonal time changes. They are packaged in a weather-resistant NEMA enclosure.

The Clock Movement

We use minute impulse clock movements similar to the four-way central drive unit shown. These do not require any lubrication.

Left: The central drive unit and digital controller shown.

Additional services...

Bells

- Cast bell equipment repairs and installation
- New cast bronze bells, design, and installation
- Optional hour strike with digital controller

Carillons

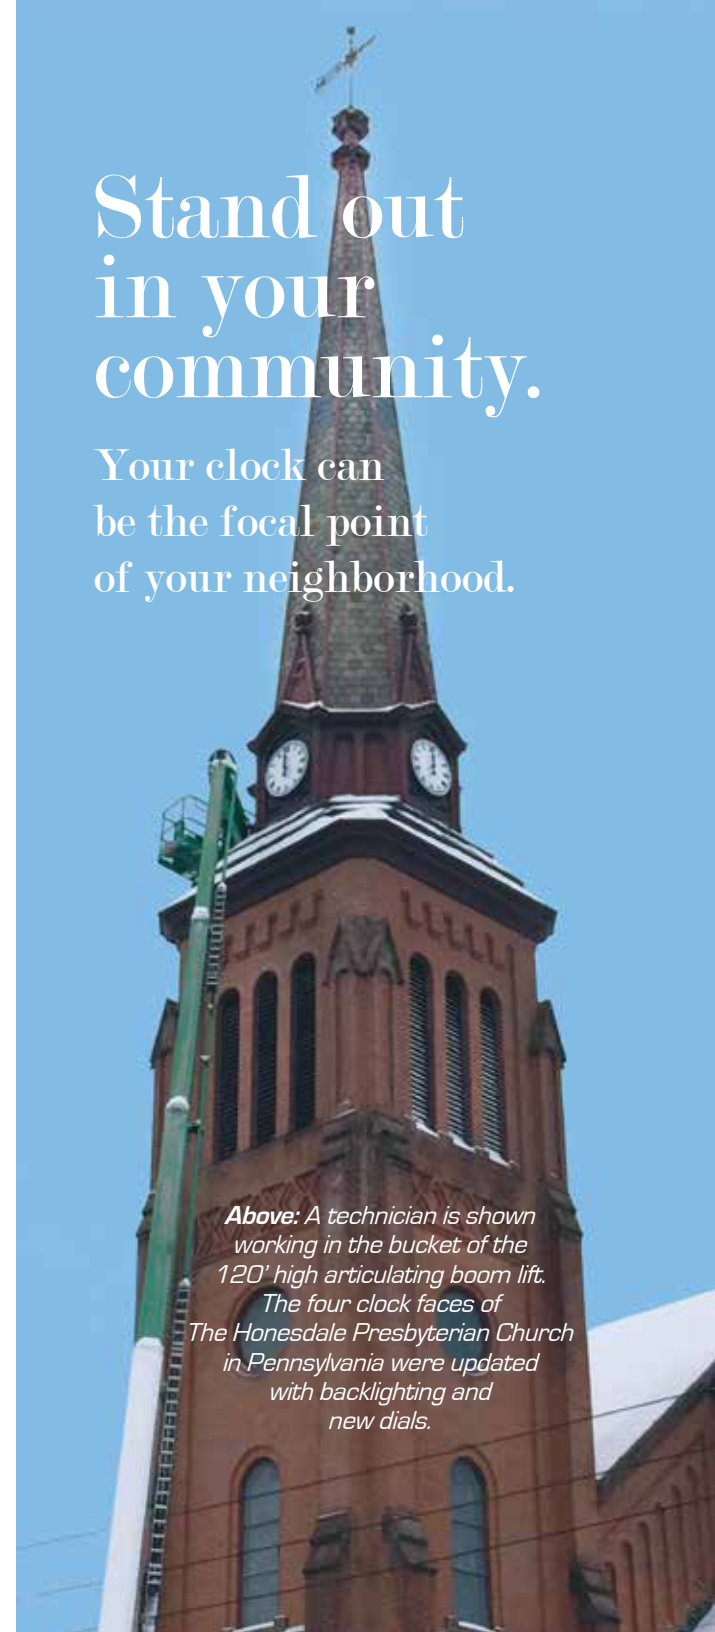

- Electronic carillon repair and installation

Stand out in your community.

Your clock can
be the focal point
of your neighborhood.

Above: A technician is shown working in the bucket of the 120' high articulating boom lift. The four clock faces of The Honesdale Presbyterian Church in Pennsylvania were updated with backlighting and new dials.

No job is too big or too small for the NCS crew, just call Ken the Clock Guy for an estimate.

Delbarton School Morristown, NJ

We worked directly with the architect during the design process of the new clock tower feature.

Right: One of the three surface mounted clock dials shown. All are controlled by an electronic carillon featuring Westminster hour strikes and the playing of daily hymns.

Baltimore, MD

This rare street clock was restored with new backlit acrylic dials, hands, and lenses. A controller powers the clock and provides Westminster hour strikes. A speaker is hidden in the top.

West Orange, NJ

This old street clock had not worked in many years.

We replaced the lenses and provided a digital movement and controller. The entire clock was stripped, primed and painted with gold accents.

Above: Before and After photos.

Union City Holy Family RC Church Union City, NJ

The four tower clocks had not worked in over 50 years.

Right: Shows the old glass hand-painted dials removed. We replaced the old ones with new custom made dials and hands with LED backlighting.

Left: The clergy shown blessing the clock prior to the reinstallation.

Below: One of the clocks shown installed.

Old Passaic Bank Building Passaic, NJ

This 6' diameter clock was custom made by IBM in 1933. It had not worked in over 50 years.

We were commissioned by the architect to restore the clock. Work included replacing the movement and controller plus refurbishing the existing bronze clock hands to their original luster. We also painted the skeleton dial a rich black for contrast.

Top: Technician preparing to remove the old clock movement.

Bottom: The refurbished clock completed.

St. Michael's Episcopal Church NYC, NY

The tower included a 10-bell chime and four 8' diameter skeleton dials.

Left: We installed new bell strikers in the carillon, a digital controller, and clock movement with new hands.
